The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 102(B) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hajos (Journal of Chromatography, 1997, pages 141-148). The claims are considered to read on Hajos (Journal of Chromatography, 1997, pages 141-148). However, if a difference exists between the claims and Hajos (Journal of Chromatography, 1997, pages 141-148), it would reside in optimizing the steps of Hajos (Journal of Chromatography, 1997, pages 141-148). It would have been obvious to optimize the steps of Hajos (Journal of Chromatography, 1997, pages 141-148) to enhance analysis.

Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hajos (Journal of Chromatography, 1997, pages 141-148) in view of either Japan 06-018505 or Japan 08-257419. At best, the claims differ from Hajos (Journal of Chromatography, 1997, pages 141-148) in reciting use of the particular acid. Japan 06-018505 in paragraph 40 of the translation submitted by applicant discloses that phosphoric acid is a desirable acid eluent for cation analysis. Japan 08-257419 in

paragraph 26 of the translation submitted by applicant discloses nitric acid is a desirable acid eluent for cation analysis. It would have been obvious to use either nitric or phosphoric acid as the particular acid in Hajos (Journal of Chromatography, 1997, pages 141-148) either because Japan 06-018505 in paragraph 40 of the translation submitted by applicant discloses that phosphoric acid is a desirable acid eluent for cation analysis or because Japan 08-257419 in paragraph 26 of the translation submitted by applicant discloses nitric acid is a desirable acid eluent for cation analysis.
